4 October 2019

Dear Mr. Salter;

This letter is in reference to the Matson property at 14 Schoolhouse Lane in Durham, NH. On 22 September 2021 I conducted a wetland investigation on your property to assist in planning.

Wetland characteristics were identified using the technical criteria in the *Regional Supplement to the Corps of Engineers Wetlands Delineation Manual: Northcentral and Northeast Region*. The soil component was classified using the *Field Indicators of Hydric Soils in the United States* and the *Field Indicators for Identifying Hydric Soils in New England*. The wetland status of plants were determined using the *National List of Plant Species that Occur in Wetlands: Northeast (Region 1)*. This is the standard used by State and Federal regulators and is based on the same basic definition of wetlands in Durham's zoning ordinance.

**There are no wetlands on the property.**

Please call if you have questions regarding this work.

Sincerely,

Michael Cuomo  
NH Soil Scientist #006  
NH Wetland Scientist #004
