**Subject: Mel True
9 Foss Farm Road
Tax Map 6, Lot 2-4
Durham, NH
CA 2000030166**

Dear Mr. DeSeve,

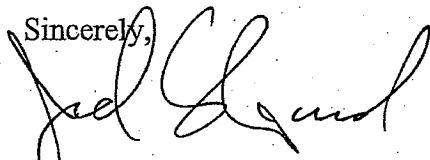

At Mr. True's request and in response to your letter dated March 21, 2005, I inspected the subject property on July 6, 2005. The purpose of this inspection was to assess the present state of the septic system.

Currently, there are no signs of septic system problems.

Mr. True's son currently occupies the home. A few years ago, the abutter discontinued use of what had been a shared septic system on Mr. True's lot, which also serviced the True home. It would appear that this decrease in sewage load has resolved any "failed" septic system issues that might have existed in the late 1990's.

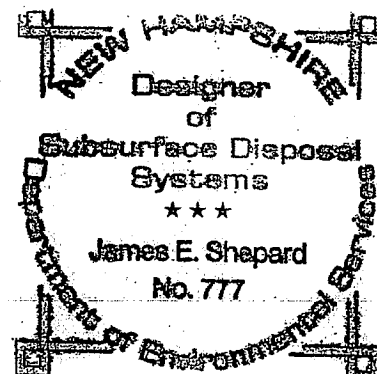

Please feel free to contact me if you have any questions.

Sincerely,

James (Jed) Shepard
Designer 777/Vice President

RE: LOD WD SS 99-05

Dear Mr. True:

Thank you for your prompt response to DES' letter of February 17, 2005. DES is willing to work with you and your designer, Jed Shepard, to determine the current status of the system serving the lot in Durham.

We will await your contact with Jed Shepard and his inspection of the septic system. If possible, I will arrange to have a DES inspector onsite to review the operation of this system.

Please let me know if you receive any further information regarding this system. Mr. Shepard may also feel free to contact me if he has any further information concerning this system. I can be reached at (603) 271-3442.

Sincerely,

Richard J. de Seve
Compliance Supervisor
DES Subsurface Systems
Bureau

RE: LOD WD SS 99-05

Mr. DeSeve

Since Mr. Callis has installed his new system, we have not experienced any overload of our old system. It seems that once you removed 2 bedrooms and washing machine, plus a one bedroom apartment, the original system has carried the load for 9 Foss Farm.

I spoke with Jed Shepard this morning and he agrees with me that the above is viable and that this is not uncommon to have a system that is not in total failure but in an overloaded situation, to handle the intended load of the system once the overload is removed. I figure that the load on the system has been reduced by approximately 60%.

I will contact Jed in the spring and have the system checked. I would welcome an inspection by any member of your team when the snow has left the ground.

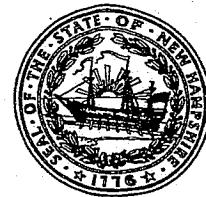

Sincerely,

Melbern D. True

RE: LOD WD SS 99-05

Dear Mr. and Mrs. True:

This letter will follow up on a Letter of Deficiency ("LOD") issued to you by the New Hampshire Department of Environmental Services ("DES") on August 17, 1999. The LOD required that you replace the failed septic system located on your property in Durham, NH. That system was shared with Mr. Tim Callis. A condition of approval of these two systems was that they be separated, no longer using a common leachfield.

DES approved a new septic system for Mr. Callis' property, and that septic system was installed and approved for operation in 2000. DES received and approved a septic system application from you in 2000. DES issued construction approval CA200030166 for the system on your property in Durham. However, that approval was limited to 90 days. Our records indicate that you did not request an extension of the 90 day deadline, and we have no record that the system was installed or inspected for operation.

Please contact this office as soon as possible to discuss submission of new plans for a new system to serve this structure. Please be advised that DES has authority to take further administrative action, including issuing an administrative order and assessment of administrative fines, if this situation is not rectified. I can be reached at (603) 271-3442.

Sincerely,

Richard J. de Seve
Compliance Supervisor
